## **Assignments 1**

## 20.3.2023

1 What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) print(func(30, 75))a) 10 b) 20 c) 15 d) 0 1) Answer :- 15 2 numbers = (4, 7, 19, 2, 89, 45, 72, 22) sorted\_numbers = sorted(numbers) even = lambda a: a % 2 == 0 even\_numbers = filter(even, sorted\_numbers) print(type(even\_numbers)) a) Int b) Filter c) List d) Tuple 2) Answer :- b ) filter 3) As what datatype are the \*args stored, when passed into a) Tuple b) List c) Dictionary d) none 3) Answer :- a) tuple 4)  $set1 = \{14, 3, 55\}$ 

```
set2 = \{82, 49, 62\}
set3 = \{99, 22, 17\}
print(len(set1 + set2 + set3))
a) 105
b) 270
c) 0
d) Error
4) Answer :- d) error
5) What keyword is used in Python to raise exceptions?
a) raise
b) try
c) goto
d) except
5) Answer :- a) raise
6) Which of the following modules need to be imported to handle date time computations in
Python?
a) timedate
b) date
c) datetime
d) time
6) Answer :- c)datetime
7) What will be the output of the following code snippet?
print(4**3 + (7 + 5)**(1 + 1))
a) 248
b) 169
c) 208
d) 233
```

8) Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None
8) Answer :- c) both a and b
9) The python tuple is in nature.
a) mutable
b)immutable
c)unchangeable
d) none
9) Answer :- b) immutable
10)
The is a built-in function that returns a range object that consists series of integer numbers, which
we can iterate using a for loop.
A. range()
B. set()
C. dictionary{}
D. None of the mentioned above
10) answer :- a) range
Question 11
Amongst which of the following is a function which does not have any name?
A. Del function
B. Show function

7) Answer :- c)208

C. Lambda function

D. None of the mentioned above
11) Answer :- c) lambda function
Question 12
The module Pickle is used to
A. Serializing Python object structure
B. De-serializing Python object structure
C. Both A and B
D. None of the mentioned above
12) Answer :- c) both a and b
Question 13
Amongst which of the following is / are the method of convert Python objects for writing data in
a binary file?
A. set() method
B. dump() method
C. load() method
D. None of the mentioned above
13) Answer :- b) dump () method
14
Amongst which of the following is / are the method used to unpickling data from a binary

y file?

- A. load()
- B. set() method
- C. dump() method
- D. None of the mentioned above
- 14) Answer :- a) laod method

A text file contains only textual information consisting of \_\_\_\_. A. Alphabets B. Numbers C. Special symbols D. All of the mentioned above 15) Answer :- d) all the mentioned above 16 Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.) captains = { "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", } Enterprise Picard, Voyager Janeway Defiant Sisko a) for ship, captain in captains.items(): print(ship, captain) b) for ship in captains: print(ship, captains[ship]) c) for ship in captains: print(ship, captains) d) both a and b 16) Answer :- both ship in captains 17) Which of the following lines of code will create an empty dictionary named captains? a) captains =  $\{dict\}$ 

```
b) type(captains)
c) captains.dict()
d) captains = {}
17) answer :- captains = {}
18) Now you have your empty dictionary named captains. It's time to add some data!
Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager":
"Janeway",
and "Defiant": "Sisko".
Which of the following code snippets will successfully add these key-value pairs to the
existing captains dictionary?
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
b) captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
c) captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
d) None of the above
18) answer:_ captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
19) You're really building out the Federation Starfleet now! Here's what you have:
captains = {
"Enterprise": "Picard",
```

```
"Voyager": "Janeway",
"Defiant": "Sisko",
"Discovery": "unknown",
Now, say you want to display the ship and captain names contained in the dictionary, but
you also
want to provide some additional context. How could you do it?
a) for item in captains.items():
print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
print(f"The {ship} is captained by {captain}.")
d) All are correct
19) answer:- for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
20)
You've created a dictionary, added data, checked for the existence of keys, and iterated over
it with
a for loop. Now you're ready to delete a key from this dictionary:
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
"Discovery": "unknown",
}
What statement will remove the entry for the key "Discovery"?
a) del captains
b) captains.remove()
c) del captains["Discovery"]
d) captains["Discovery"].pop()
20) Answer :- del captains["Discovery"]
```
